Wave Two

Buy the employee.
Or buy the result.

The marketplace for Digital Employee software
and creator-delivered results.
AI employees that belong to you, not a platform.

Shehryar Ali
USD 500K pre-seed target for 12 months of validation.

The marketplace problem

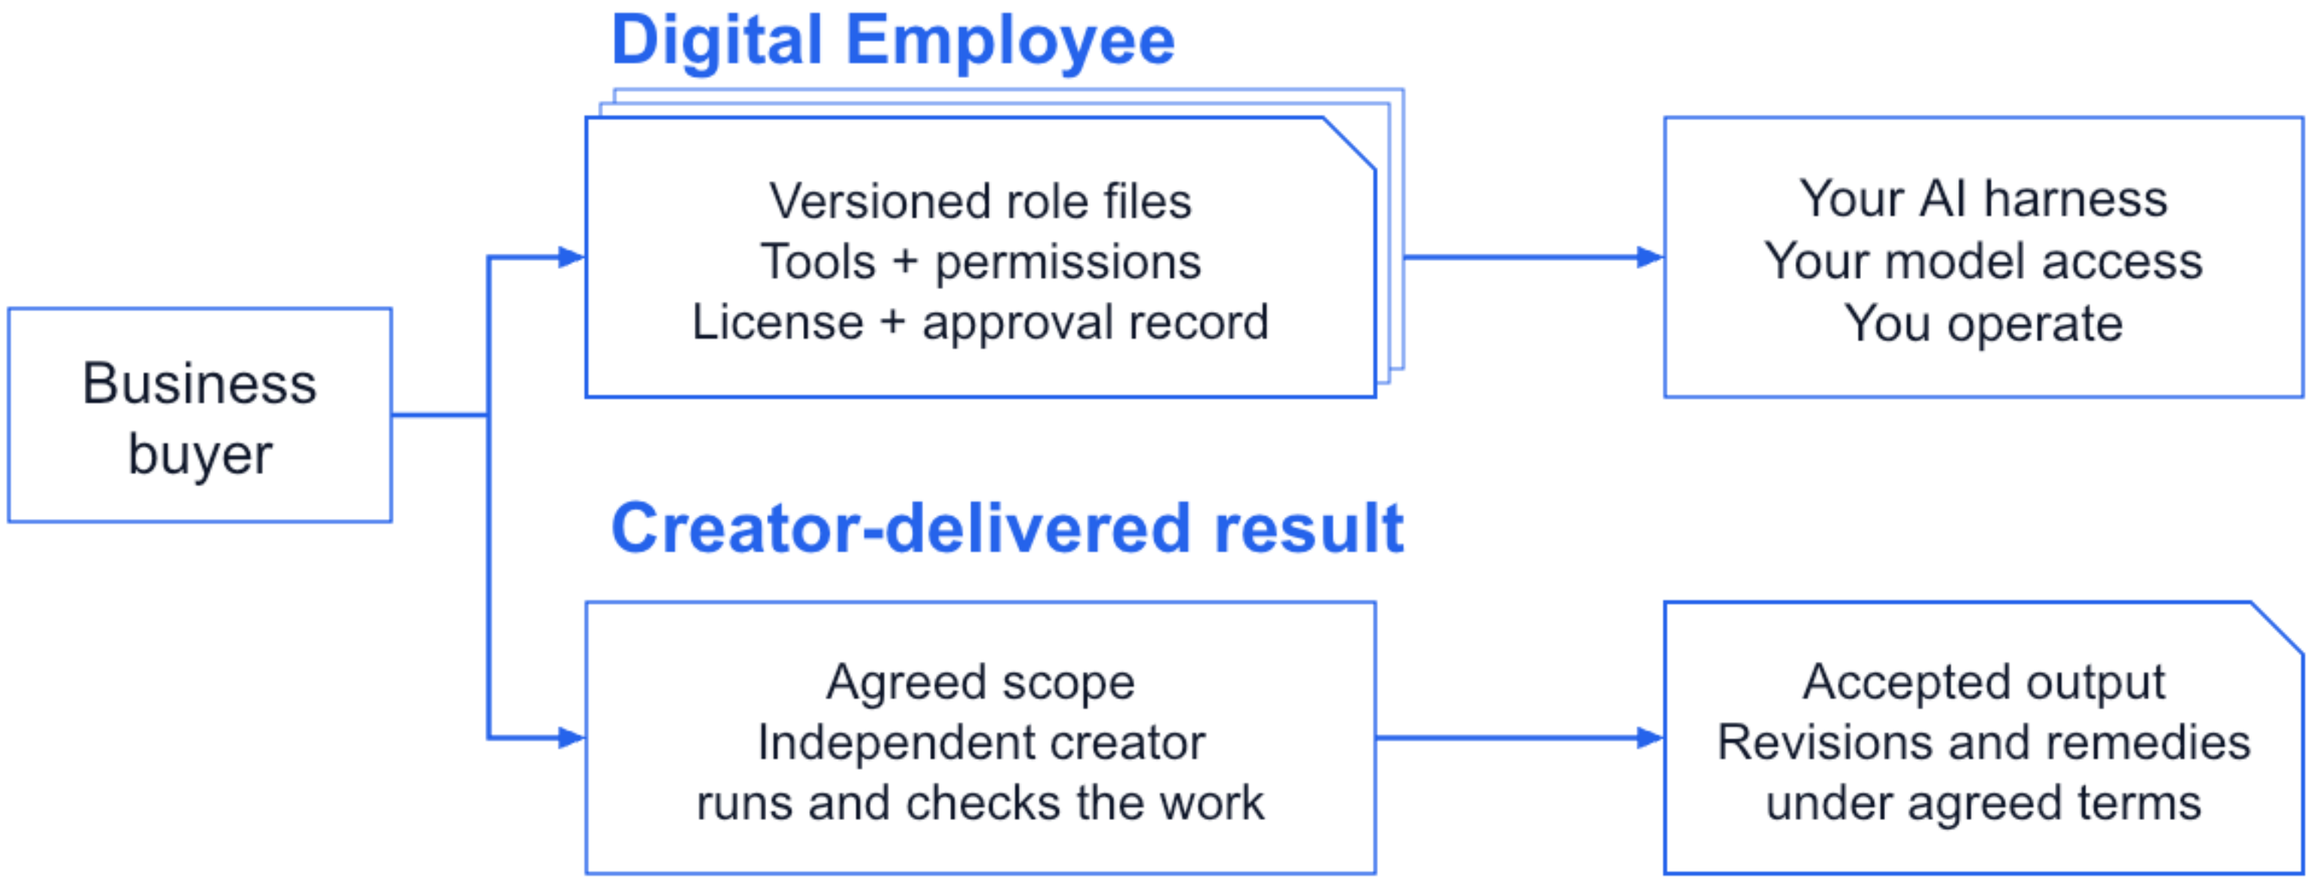

Buyers need to know what they get, where it runs and who operates it.

Reusable AI roles and finished work need a trusted buying process.

Wave Two brings complete role packages and creator-delivered orders into one market.
Buyers choose control or convenience. Creators choose software, services or both.
The bet: clearer scope, supported setups and accountable delivery justify a purchase.

Why now: Upwork Q2 2026 AI-related GSV grew over 22% YoY. Fiverr marketplace revenue fell 15.5%.
AI demand is moving, but marketplace success is not automatic. Context only, not Wave Two traction.

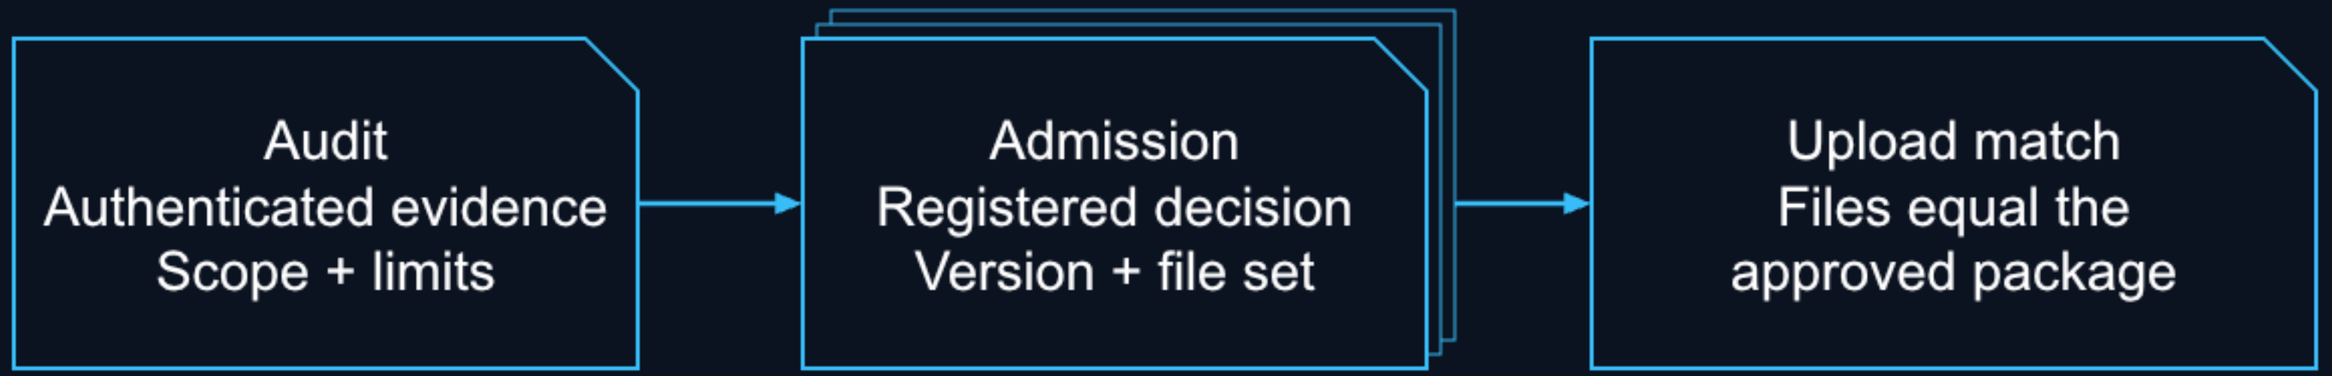

Two purchase paths for the same business buyer

Creators provide memory modules. Wave Two sets the minimum standard. Buyers control private state.
Software licenses, not employment. No unconditional platform warranty. Package/service pairing is optional.

Protocol evidence follows the exact package

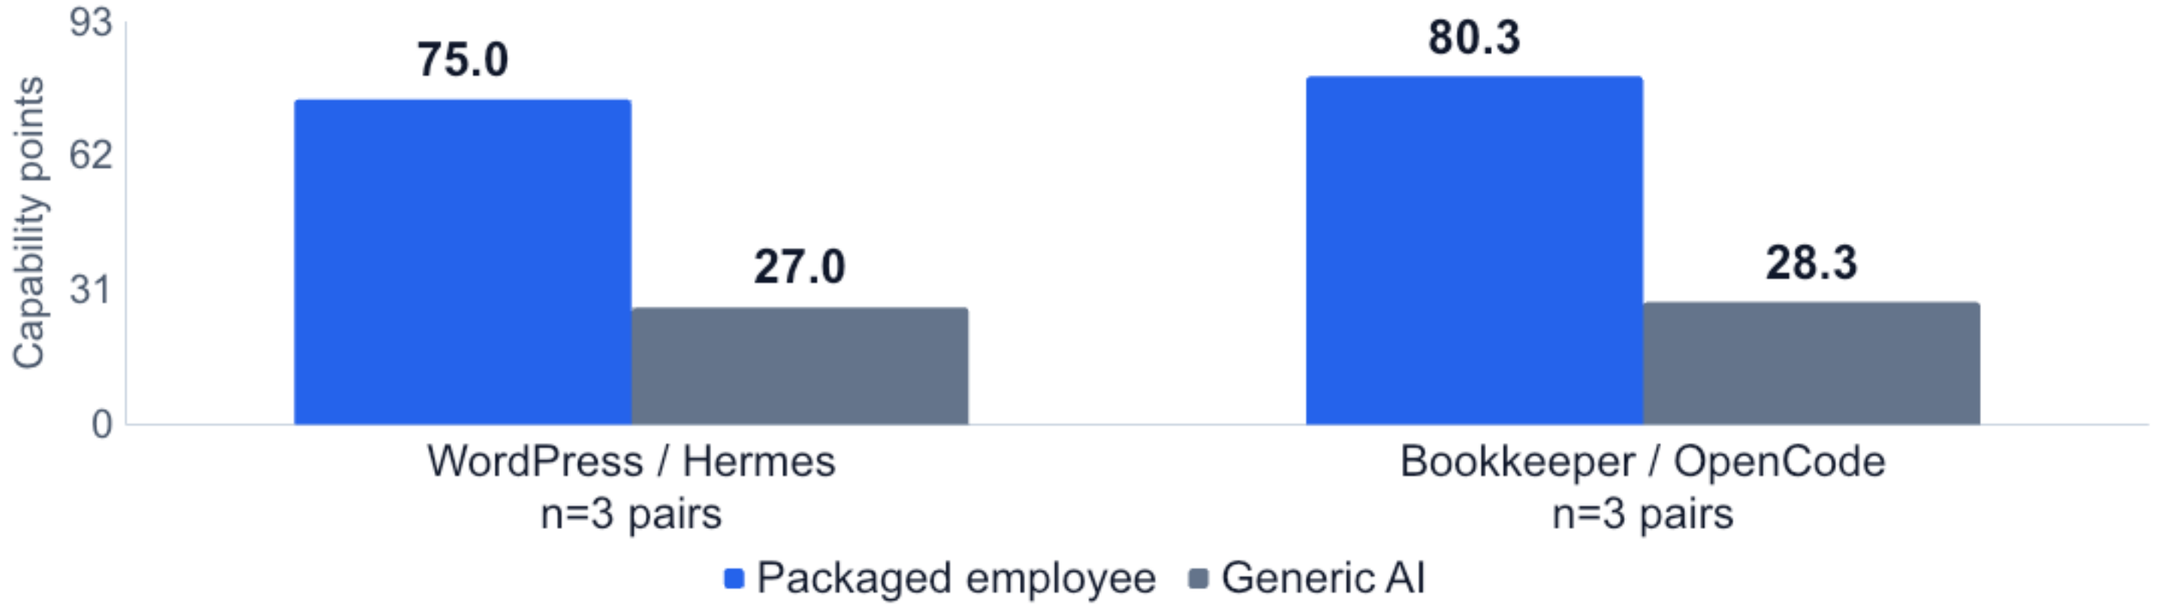

3 tested employee packages

The approval record identifies the exact files and tested scope.

WordPress Developer, Bookkeeper and SEO Auditor. US Protocol patent application filed, not granted.
Package approval is scoped. Service-delivery acceptance is a separate pilot test.

Higher capability rubric scores with packaged roles

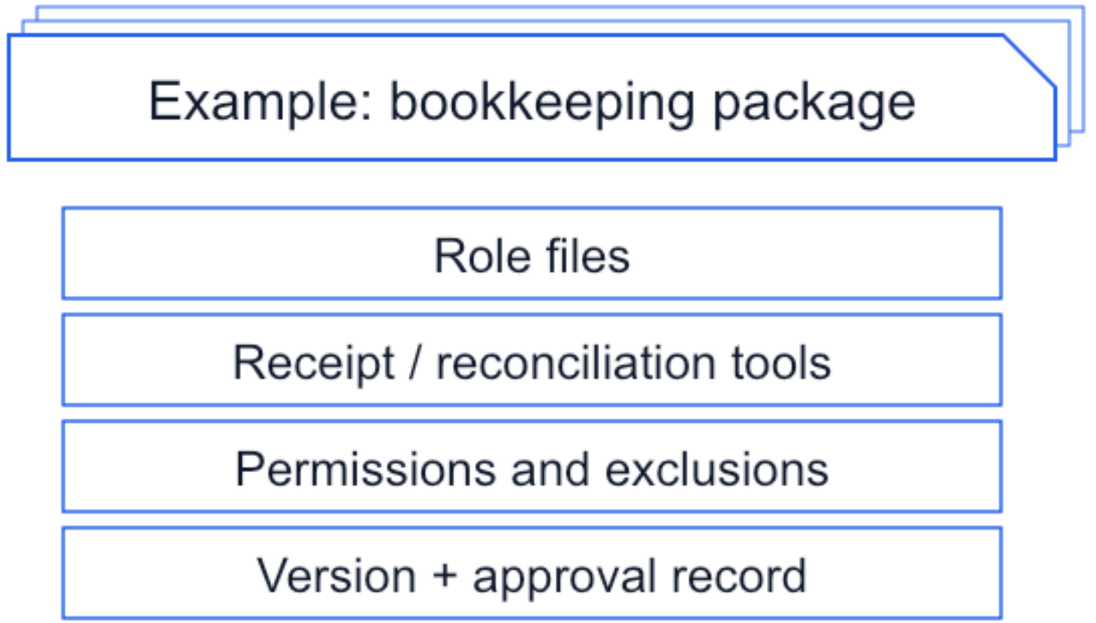

Package bet: repeatable roles with structured, checkable outputs.

Grok 4.6 in both series. 3 pairs per role, capability max 93. Latency excluded; targets missed.
Gap includes structured-artifact/tool-contract checks, not a general accuracy study.
WordPress v3; Bookkeeper v2, 1 Sep 2026. Historical tests, not cross-provider or customer proof.

Two transaction paths, one marketplace

USD 150 license example

Buyer operates in a supported harness.
Buyer supplies model access.

USD 300 order example

Example order: a creator prepares an agreed transaction set and exception log.

The buyer checks the output. Revisions and remedies follow terms.

Tax filing, accounting sign-off and moving funds are excluded.

15% illustration: license USD 22.50 / order USD 45, before costs/deductions.

Illustrative workflow and price tests, not the company scope. 15% net-receipt fee hypothesis.
Creators set scope/pricing. Service terms are not final. A service need not use a listed employee.

A repeat-work scenario, tested one workflow at a time

Year 3 illustration

5,000 buyers × USD 2,400/year = USD 12M

USD 12M volume × 15% = USD 1.8M fees

Before costs and fee-base deductions. Not a forecast or demand estimate.

Eight USD 300 orders is one buying-frequency example.
Prices, frequency and fee remain hypotheses to replace with pilot data.

Context only: ~9.4M employers (Census/UK BPE/ISED/ABS); Upwork 2025 GSV USD 4B.
Neither establishes our addressable demand.

The transaction connects a package to its evidence

Alternatives	Documented buying paths	Wave Two commercial test
Relevance AI / AGNT	Agent, memory and configuration features	Will buyers adopt a complete approved role in a supported harness?
AIMX / NOMOS	Licensed downloads or local ownership/state	Will maintained package evidence improve purchase and reuse?
Agentalent / Fiverr / Upwork	Creator-delivered services and work	Will scoped delivery and accountability win repeat?

A version-matched file set and approval record.
Or a scoped result from an accountable creator.

All can adapt. Defensibility must come from accepted supply, maintained evidence and repeat purchase. Ownership, a patent filing or a 15% fee alone does not establish it.

A founder who has built and transferred products

Shehryar Ali

Founder and CEO, S.T.A.R.S Private Limited
20+ years of technology delivery
Two prior product ventures, MyDoc and Greenstone, each acquired within 24 months.

USD 1M+ earned through marketplace platforms
Expert-Vetted top 1%. 100% Job Success.

Two awards presented by Pakistan's President.
Two Governor of Punjab recognitions.
Author of The Offshore Trap.

Earlier ventures, not Wave Two exits. Marketplace earnings separate from company/other earnings.
Sole founder of Wave Two. Full recognition, including CXO Global award, retained in founder profile.

Independent creators first, then paid demand

A focused creator cohort tests both buying paths before a wider catalogue.

Recruit business-work specialists through founder outreach, demonstrations and referrals.
Select repeatable workflows, then recruit their buyers. Track admission, purchase and support effort.

Proposed package incentive: 10% for the first 25 qualified creators,
ending at 12 months or USD 10K net receipts per creator.

No external supply or buyers yet. Independent creators deliver; founder triages disputes.
Score each lane only after six creators and 20 distinct paid buyers. Operational samples, not market proof.

Twelve months to test the marketplace model

Now to month 2

Public preview + Admin
Protocol + three packages
Release QA
Entity / IP / payouts

Months 3-6

20 independent creators
100 paid transactions
Report each buying path
Measure buyer and creator effort

Months 7-12

Observe full repeat cohorts
Test creator retention
Correct weak workflows
Expand only if gates hold

80%

Activation, eligible buyers 7 days; exclusions shown

90%

Service acceptance

20%

Repeat, full 90-day window

Positive

Variable contribution

Targets, not promises. Minimum six creators and 20 distinct paid buyers per lane before scoring.
250K ends funded deployment at month 6. Later repeat cohorts need continued funding. No current users or revenue.

USD 500K for 12 months of marketplace validation

Use, USD K	500K / 12mo	250K / 6mo
Engineering, QA and security	180	90
Founder draw	60	30
AI access, cloud and software	30	15
Workstations and equipment	30	30
Entity, IP, legal and payments	30	20
Initial relocation and setup	10	5
Creator and buyer activation	110	45
Contingency	50	15
Total	**500**	**250**

500K target
Founder + architect + QA,
with security specialists.
USD 5K/month founder draw.

250K minimum close
Six months, narrower pilot.
Same staged equipment.

Later expansion capital
is a separate future round.
