PRODUCT DEVELOPMENT AND LAUNCH ROUND

A marketplace for AI employees you keep.

Developed private marketplace for standardized digital employees. Protocol 1.0.0rc1 complete. Three demonstrable employees. Release candidate under QA.

Shehryar Ali | USD 500,000 target

The tool changes. The job should continue.

A repeatable business role should not need rebuilding every time a company changes AI tools.

THE VISION

Software as a Companion (SOAC): complete digital employees customers control, with approved context across supported tools.

Agent Skills (open standard) makes reusable expertise possible. Agent Marketplace adds packaging, evidence, commerce and buyer-controlled continuity.

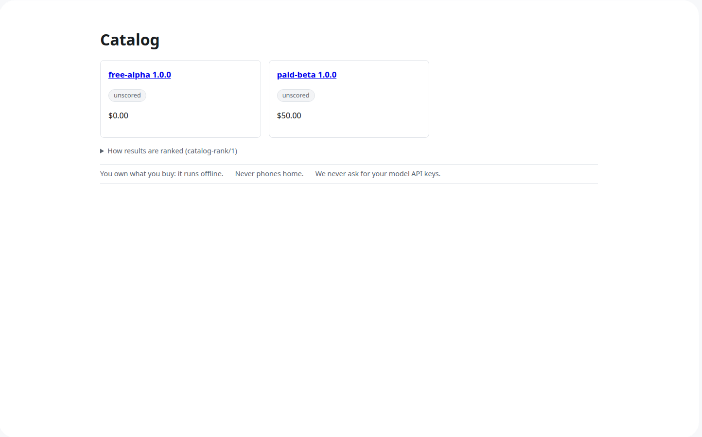

The purchase flow is implemented.

1. Discover

Search the catalog.
Inspect role, permissions, version and evidence.

2. Purchase

Quote, reserve and order.
Paid commerce stays sandbox-only.

Private and unlaunched. Buying never grants automatic execution or credential access.

Three employees demonstrate the Protocol.

WordPress Developer

Controlled role benchmarks and tested context retrieval across selected environments.

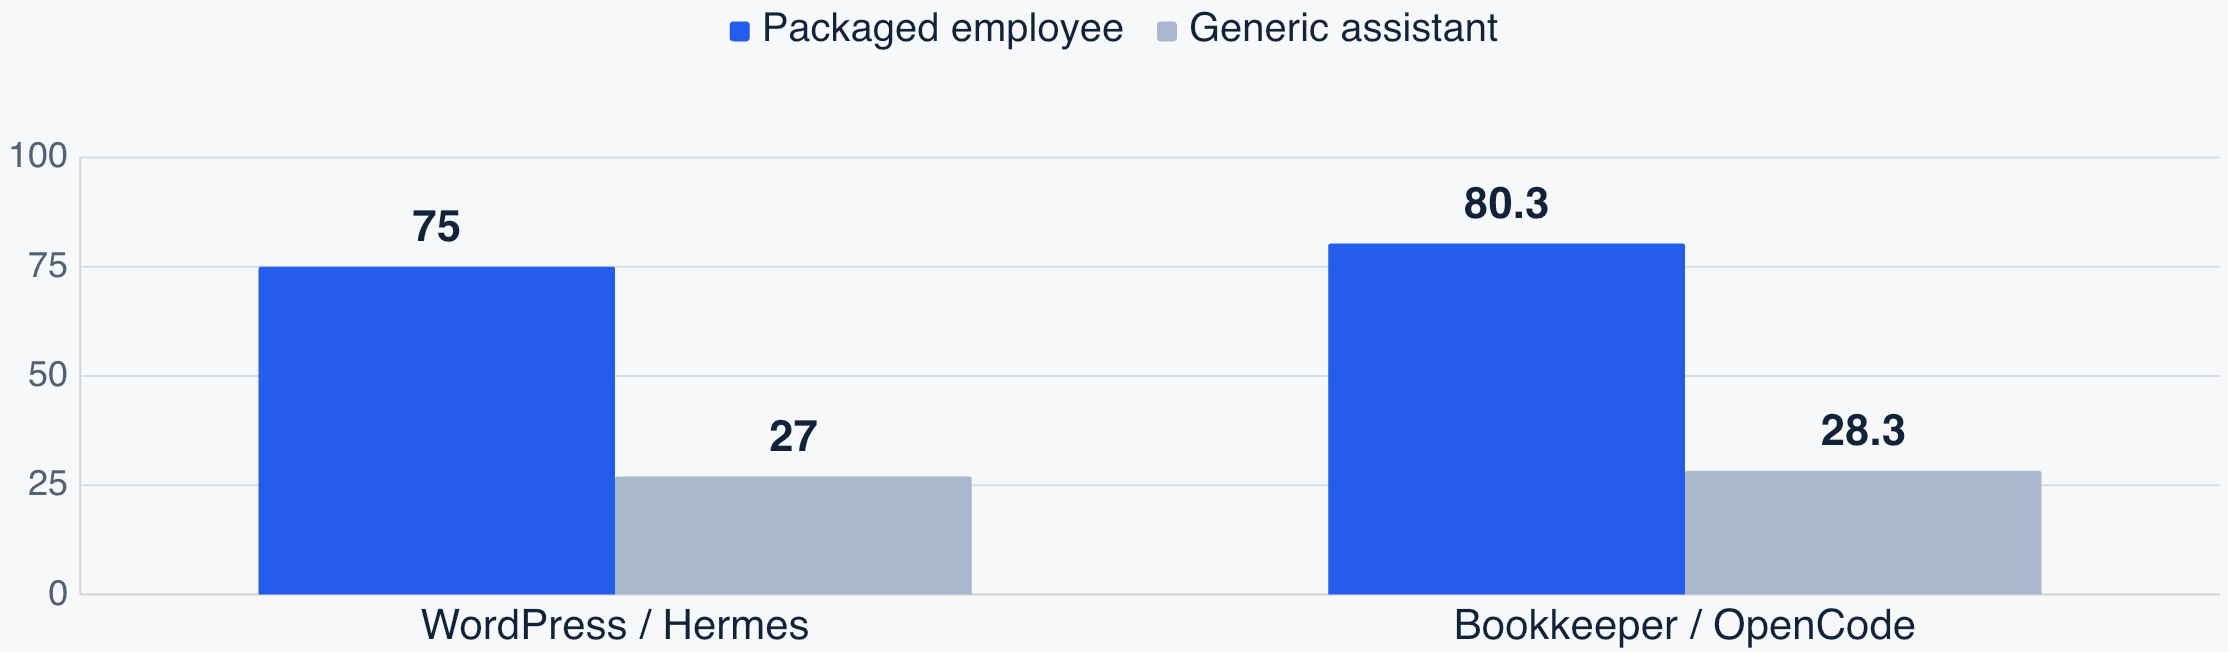

Bookkeeper and SEO Auditor

Bookkeeper paired runs averaged 80.3 versus 28.3 for ordinary AI.

SEO Auditor is the third accepted Protocol package. Its capability language remains evidence-specific.

These demonstrate the technology. The marketplace is the business.

Controlled benchmarks show material gains.

WordPress: 75 versus 27.
Bookkeeper: 80.3 versus 28.3 mean.
Recorded controlled runs; Bookkeeper uses three paired runs.

Controlled tasks, not customer outcomes.
Latency targets were missed.
No universal compatibility claim.

Protocol acceptance records continuity.

THREE ACCEPTED EMPLOYEES

All three completed local Protocol conformance and authenticated ordinary audits.

A US patent application covering the Protocol work has been filed.

Identity, compatibility and lifecycle observations passed within the recorded scope.

Persistent approvals

Persistent package registrations and immutable upload checks passed.

Credentials stay separate from approved context.

Evidence boundaries remain

Ordinary audits do not create security certification, fresh capability scores or universal harness support.

The private marketplace release candidate is built.

Engineering record

52 test suites
1,149 passing tests
0 failed tests
33 of 33 browser checks

TypeScript clean.
Earlier 61-specialist system public under MIT.

Launch gates

Private and unlaunched.
Production host not booted.
External QA and bounded review remain.
Live payments need owner approval.

Complete employee packages differentiate us.

Related alternatives

Relevance AI: platform marketplace
AGNT: runtime plus marketplace
Agentalent: managed agent services
AIMX: download proposition
NOMOS: local runtime, exchange not open

Related products, not five equivalents.

Agent Marketplace

Complete role package under customer control.
No mandatory marketplace runtime.
Exact-digest approval continuity.
Credentials stay separate.

Supported paths only. No universal compatibility claim.

Marketplace economics and addressable scale.

85% / 15%

Creator / platform share
of net receipts.

Current launch model.

Live payment activation remains
owner-controlled.

USD 5.6B

Base SAM annual GMV

2.35M employer-business segment.
USD 846.8M platform revenue
opportunity.

Assumption-based, not traction.

A founder with more than 20 years of delivery.

Shehryar Ali

Founder and CEO, S.T.A.R.S Private Limited.

More than 20 years building technology companies and delivering software.

Sole founder of Agent Marketplace.

Delivery record

USD 1M+ earned through marketplace platforms.
100% JSS | Expert-Vetted | Top 1%

Recognition

Two presidential awards.
Two Governor of Punjab recognitions.
Top Entrepreneur Award, CXO Global.
Author, The Offshore Trap.

A 12-month path to regional launch.

Production

Complete final wiring, controlled hosting, external review with bounded findings and launch QA.

Supply

Onboard the first creator cohort.
Publish accepted packages under one standard.

Demand

Run buyer design partnerships.
Measure installs and repeat use.

The founder can commit full time after funding and relocate to the selected funded market. Paid launch follows measured use, signed commercial terms and owner authorization.

USD 500K target. USD 250K preferred close.

12-month launch plan	USD thousands
Engineering and production	120
QA, security and compliance	80
Cloud, models and software	50
Legal, entity, IP and MoR	40
Creator and buyer launch	100
Hardware and company setup	55
Founder and contingency	55
Total	**500**

Twelve-month launch plan
Milestone-tranched deployment

USD 250K is the preferred first close.

Route-sized checks use adjusted scope.
USD 200K remains executable.

Export, memory and runtime are distinct.

Relevance AI | documented

Creator sales, project cloning, multiple models, persistent memory and config exports.

MCP clients operate Relevance projects.

Not tested: .rai contents or state migration to an independent runtime.

AGNT | documented

Agents, persona, tools, workflows, persistent memory and model choice.

The agent config export excludes memories and credentials.

Other state-transfer routes and paid creator commerce remain unchecked.

Services, downloads and a prelaunch exchange.

Agentalent

Builder-run agents. Evaluated gigs and retainers, human approval and payments.

AIMX

Claims licensed downloads, creator pricing, updates, review and scans. Artifacts untested.

NOMOS

Local runtime and persistent state. Exchange not open. Other-harness execution unverified.

Different delivery models compete for the same budget, including hosted hyperscaler agent platforms.
Continuing use depends on the actual license, dependencies and state-transfer path.
